

**Injured Slow Loris, Rescued from an Elementary School 4 km from the Park
(October 4th, 2011)**

In the morning, Elementary school's students found this poor creature on school's front yard and play with it. One of the student get bite and cry.

My son informed me this when he get back from school. I go to school, ask some teacher, and bring back home the slow loris

Dr Esti (ECC) come by and gave some medical treatment. Me and my wife continue the wound caring.

The slow loris has a great wound on it's left arm and leg. 6 cm of it's arm muscle exposed without skin.

One of it's left leg's finger almost cut off.

Perhaps it was get stung on an electric cable???. Many accident of slow loris get stung and dies, here.
